Young Iranian engineer based in Turin, active in the Bitcoin and open-source technology ecosystem. His background spans full-stack development, infrastructure engineering, and Bitcoin protocol research, combining deep technical depth with a strong sense of purpose around privacy and financial sovereignty.

Studying Computer Engineering part-time at Politecnico di Torino, with a specialization trajectory in Cloud Native DevOps and Bitcoin/Lightning protocol development. Serves as Lightning Network Team Lead at BitPolito, the Politecnico di Torino student team, guiding students through protocol fundamentals and their first open-source contributions.

Spoken at Baltic Honeybadger 2025 on hacker culture, FOSS, and sovereign trading across Lightning, RGB, and Liquid. Deeply embedded in the Bitcoin builder community.

Currently full-time committed to KaleidoSwap, leading the development of the frontend and TypeScript SDK, building CI/CD pipelines, and managing production infrastructure end-to-end. Focuses on the infrastructure layer, from monitoring and deployment pipelines to the developer-facing SDK.
